GAT ANDRES BONIFACIO HIGH SCHOOL

Read Me First

The safest path from external drive to a verified Nexora workspace

Evidence edition
Instructions match application snapshot 211483f07b901299b48ae42eda318c7448f1cbfd. Production credentials and school records are not included.

Use this package in this order

1. Copy the entire NEXORA_HANDOFF_2026-10-01 folder from the external drive to a local SSD. Keep the drive copy unchanged as your reference copy.
2. Open START-HERE.html, then read the System Manual chapters 1 through 6 before installing or restoring anything.
3. Verify MANIFEST.sha256 before trusting the source archive or APK.
4. Choose the Windows or Linux/macOS quick start and prepare unique local secrets from the supplied templates.
5. Start the stack, wait for health checks, then use the User Manual for role-by-role web and mobile tasks.

What is included

Folder	Purpose
01-MANUALS	Complete printable/editable User and System Manuals plus searchable Markdown sources.
02-QUICK-START	Beginner setup paths, first-run checklist, and symptom-based troubleshooting.
03-SOURCE	Source-only archive locked to commit 211483f; dependencies and secrets are excluded.
04-MOBILE	Current Android APK, install guide, and SHA-256 evidence.
05-CONFIG-TEMPLATES	Sanitized templates and the complete 98-key configuration reference.
06-DATABASE-AND-RECOVERY	Backup/restore runbooks, guarded scripts, recovery checklist, and synthetic fixture notes.
07-DIAGRAMS / 08-VISUALS	Architecture diagrams and the evidence images used by the manuals.
09-DEPLOYMENT-EVIDENCE	Snapshot, verification, release, and evidence-boundary records.
10-LICENSES-AND-NOTICES	Project and direct-dependency notices.

Safety rules

Stop immediately
Do not continue if the target database, environment, account role, backup checksum, or affected-record preview differs from what you intended.

- Never copy a production .env file onto the external drive.
- Never run containers, databases, node_modules, or Android builds directly from the removable drive.
- Never remove Docker volumes or overwrite a production database as a troubleshooting step.
- The first setup needs internet access for container images, npm/Python packages, and AI models.
