GAT ANDRES BONIFACIO HIGH SCHOOL

First-Run Checklist

Evidence required before the system is trusted or real users are onboarded

Evidence edition
Instructions match application snapshot 211483f07b901299b48ae42eda318c7448f1cbfd. Production credentials and school records are not included.

First-run acceptance checklist

Rule
Do not onboard real users or import real rosters until every applicable row passes.

Pass?	Check	Expected evidence
[ ]	Identity	VERSION.txt shows commit 211483f07b901299b48ae42eda318c7448f1cbfd.
[ ]	Integrity	MANIFEST.sha256 verifies with no missing or changed files.
[ ]	Location	Source is extracted to a local SSD, not executed from the external drive.
[ ]	Secrets	Every CHANGE_ME value is replaced; .env is untracked and private.
[ ]	Compose	docker compose config --quiet exits successfully.
[ ]	Services	postgres, redis, ollama, backend, ai-service, and frontend are running/healthy.
[ ]	Backend	GET http://localhost:3000/api/health/ready succeeds.
[ ]	Web	http://localhost:3001 loads and the browser console has no blocking error.
[ ]	Roles	A synthetic learner, teacher, and administrator can sign in and only see allowed workspaces.
[ ]	Read flow	One dashboard/class/calendar view loads for each role.
[ ]	Write flow	One synthetic draft or preview saves once and remains correct after refresh.
[ ]	Mobile	APK checksum matches before install; sign-in reaches the configured HTTPS API.
[ ]	Evidence	Operator records date, environment, source commit, result, and unresolved warnings.

Stop conditions

- Any checksum mismatch, unknown source commit, or package path that points outside the copied handoff folder.
- Database/readiness errors, role leakage, policy bypass, or a write result that changes after refresh.
- A request to reuse production secrets or copy production records into an uncontrolled device.
