GAT ANDRES BONIFACIO HIGH SCHOOL

Android Installation Guide

Verify, install, connect, and validate Nexora Mobile 0.1.56 build 57

Evidence edition
Instructions match application snapshot 211483f07b901299b48ae42eda318c7448f1cbfd. Production credentials and school records are not included.

Artifact identity

Field	Expected
Version	0.1.56
Build	57
Size	37,663,914 bytes
SHA-256	e5d8c1abc1935768dae5b2523bd85adf9ccab50085a7f6a516495304890495d8

1. Verify before installing

```
Windows: Get-FileHash .\nexora-mobile-0.1.56-build57.apk -Algorithm SHA256
Linux: sha256sum nexora-mobile-0.1.56-build57.apk
```

Stop
Do not install if the size or SHA-256 differs, even if the file name looks correct.

2. Install on Android

1. Copy the APK to the Android device through a trusted cable or the external drive.
2. Open the file in Files/My Files. If Android asks, allow installs from that specific file manager temporarily.
3. Review the app name and requested permissions, then choose Install.
4. Open Nexora and enter the school-provided server and account details only through the app's supported flow.
5. After installation, disable the temporary Install unknown apps permission if it is no longer needed.

3. Confirm operation

- Sign-in screen renders with the GABHS/Nexora identity.
- The configured API is reachable from the device network.
- One role workspace loads and a sign-out/sign-in cycle works.
- An installer launch is not proof of installation; confirm the app opens and reports version 0.1.56 build 57.
